

Client Name: Un-named national data centre 2

Market Sector of Client: Data Centre

Geographical location of site: Milton Keynes

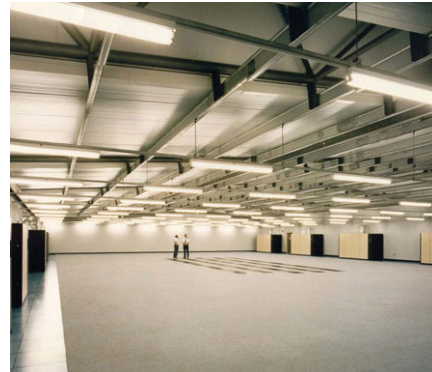

Our Role

cfes were approached by a national data centre company to design and install a close control air conditioning system to provide the right working temperatures for the servers and other equipment.

Engineering Solution

cfes installed an Airedale air handling system, which is able to provide cooling for the 25,000 sq. ft. of space, this will keep the centre within the optimum range of 22°C / - 21°C.

Using a 600mm raised flooring system the air is distributed to the servers to keep them running at the right working temperature 24 hours a day 365 days a year.

Outcome

The project was a complete success, being delivered on time and on budget.
