

## **Un-named national data centre company.**

### **Category**

Air conditioning and building services

### **Company**

A national data centre company based in Maidenhead which provides a portfolio of carrier-neutral data centers who have recently completed the building of their fourth data centre which will be based in Milton Keynes with an overall floor plan of 25,000sq ft and a cooling requirement of 3 megawatts.

### **Challenge**

CFEs have installed over 52 floor standing close control units within the Maidenhead site and also provide a full service and maintenance package 24hrs a day 365 days a year with a maximum 4 hour response time.

### **Method**

Our dedicated team have designed an individually tailored maintenance regime which provides a full range of air conditioning maintenance within a planned and structured schedule, this ensures environmental plant controls operate at optimum reliability and efficiency at all times.

### **Results**

A reliable and cost effective service with ongoing improvements to both performance and cost control gained through our partnership approach with the building management team. Ongoing provision of critical internal conditions gained by strict adherence to maintenance and test schedules - and by responding efficiently to any customer concerns. A single point of contact, which eliminates multi-contractor confusion, and improves both communication and service quality. Added value through ongoing monitoring - our ability to forward plan for maintenance, repair and replacement eliminates costly disruptions.
